

## Software Product and Program Manager (Aviation Applications)

If you love building disruptive technology and geek out on airplanes, then APIJET may be the right company for you. We are one of the Aviation Partners family of companies (winglets!) and deliver real-time onboard and cloud-based analytics to help airlines become more efficient and save money. APIJET is a growing company looking for a Software Product and Program Manager with background aviation to join our team.

If you are results-oriented, creative and enjoy working with a small team in an entrepreneurial environment, we want to talk to you. You will work with other team members to ensure the successful development of our platform components.

Being a small company, you can be assured of working on exciting and varied projects with an opportunity to make a direct impact on our solutions.

### Responsibilities:

- Lead product definition process including customer research, value proposition development, user experience development and user interface definition/wireframing.
- Define multi-release product roadmap.
- Distinguish feature definition from architecture & component definition.
- Coordinate application & server integration.
- Demonstrate understanding of and experience in product definition
- Lead software and test engineers in modern software development process including specification creation, architecture and feature definition
- Drive team delivery via effective meetings, epics and stories using Jira & confluence.

### Qualifications and Requirements:

- BS degree in Computer Science, Electrical Engineering or other Engineering discipline with demonstrated software knowledge.
- Demonstrated understanding of and experience in product definition.
- Demonstrated understanding of and experience in modern software development process including leading a team in specification creation, architecture and feature definition, epics and stories, & testing.
- Experience with Jira & Confluence.
- Experience leading local and remote teams.
- Interest in aviation and experience with python; JavaScript and C++ a plus.
- Familiarity with aircraft, aviation, avionics and associated standards such as ARINC 429, ARINC 717, ARINC 834 (STAP, ADBP)
- Good verbal and written communication skills.
